

Ground Zero — The Nuclear Demolition of the Twin Towers!!

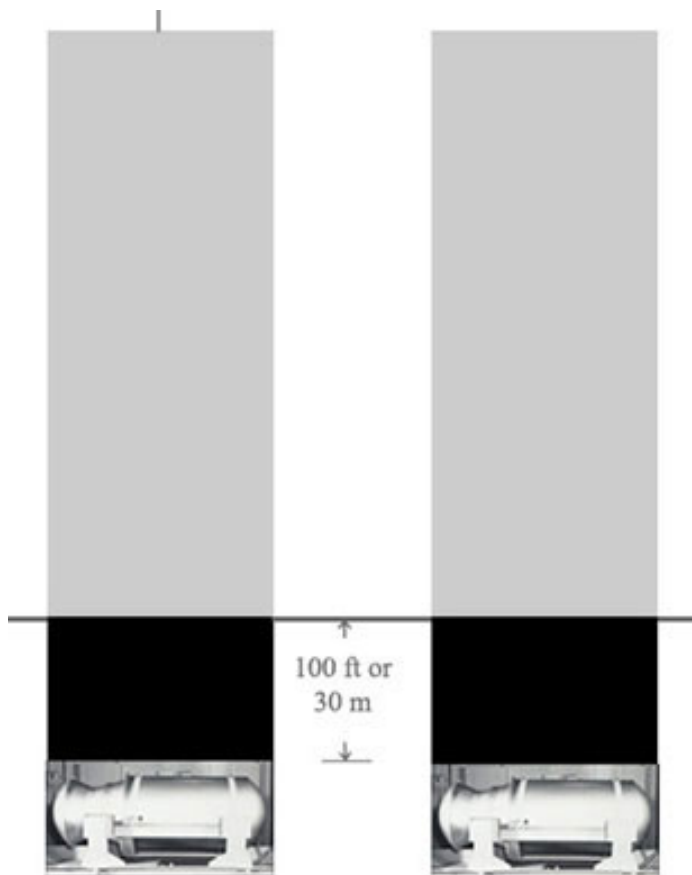

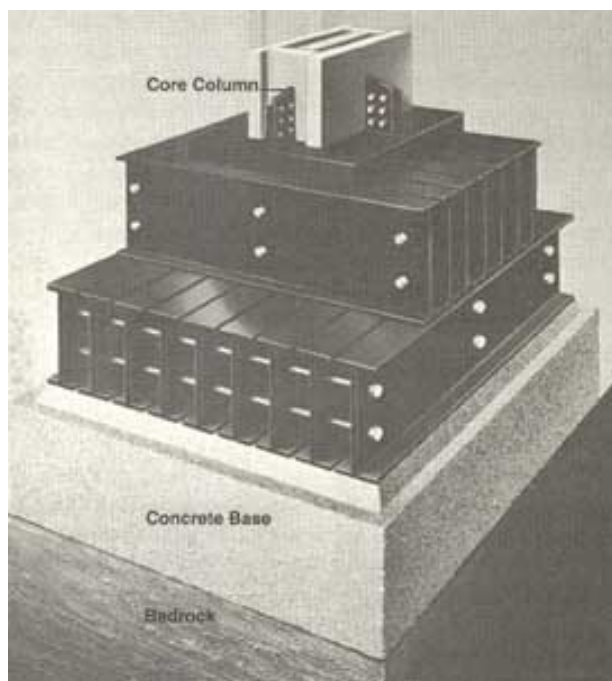

"He (JEHOVAH) revealeth the *deep* and secret things: he knoweth what is in the darkness, and the light dwelleth with him" (Daniel 2:22).

"He (Pentagon) made a PIT and digged it (with nukes), and is fallen into the ditch which he made. His mischief shall return upon his own head and his violent dealing shall come down upon his own pate (head)" (Psalm 7:15-16).

The Reformation Online is getting to the *bottom* of the conspiracy!!

"Ground zero: The site directly below, directly above, or at the point of detonation of a nuclear weapon."

(Webster's Dictionary of the English Language).

The soil on the island of Manhattan is perfect for building skyscrapers. In midtown Manhattan, BEDROCK is only about 10 feet or 3 meters deep. However, at the location of the Twin Towers in the lower part of Manhattan BEDROCK is about 100 ft or 30 meters deep. There is also the problem of water from New York harbor and the Hudson River. Midtown Manhattan was thus the IDEAL place to build the Twin Towers. When it comes to demolition by nuclear weapons the deeper the foundation the better because depth of soil hides the effects of RADIATION:

"By testing underground, man has placed a shield around most radioactive by-products from

nuclear explosions. In contained underground detonations of fusion devices, radioactive products are trapped in cracked rock and rubble beneath the ground's surface. The gaseous products such as water vapor, carbon dioxide, iodine, and tritium gradually cool. Most of the water and iodine condenses to a liquid. Neutrons promptly interact with lithium in the rock minerals to produce the radioactive isotope tritium (see Box 2.1), and this heavy isotope, in part, replaced ordinary hydrogen in water to form tritiated water. The radioactive water mixes with natural ground water and moves with it through the surface rock."(Bolt, *Nuclear Explosives and Earthquakes*, pp. 83-84).

The Pentagon has made *hundreds* of underground nuclear explosions!!

Since the first test of the atomic bomb on July 17, 1944, the Pentagon has made *hundreds* of undersea and underground atomic and hydrogen explosions. Most of them were disguised as EARTHQUAKES....These test tell them the exact size of the nukes required and also the size of the crater:

Nuclear explosive "Salmon" (5.3 kt) being lowered into its emplacement hole at Hattiesburg, Mississippi in 1964.

Hundreds of weapons of mass destruction have been tested by the Pentagon during the last 50 years. These tests tell them the exact size of the nuke required to knock any building down. Today's nukes are so small that you can carry them in a knapsack.

In the case of the Twin Towers all they had to do was place the bombs directly under the foundations.

In a matter of SECONDS the millions of degrees heat will turn concrete, steel and solid rock into vapor and leave a huge empty space when the foundations stood.

Outer space and surface nuclear testing was banned when President Kennedy signed the Test Ban Treaty in 1963 so the Pentagon *had* to go UNDERGROUND:

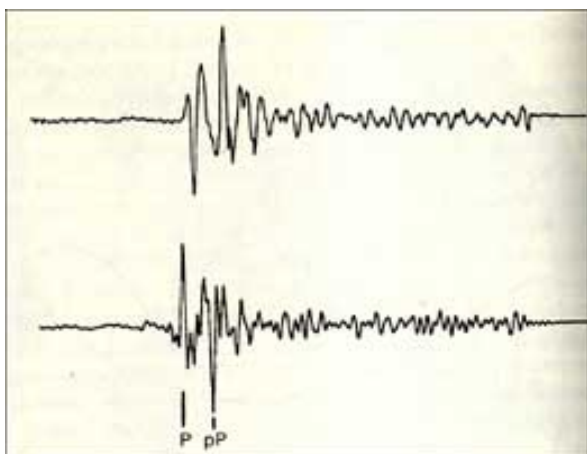

The island of Eniwetok in the Pacific is gone after the second test of a hydrogen bomb on Oct., 31, 1952. The "Mike" shot left a crater 164 ft deep and 6,260 ft in diameter.

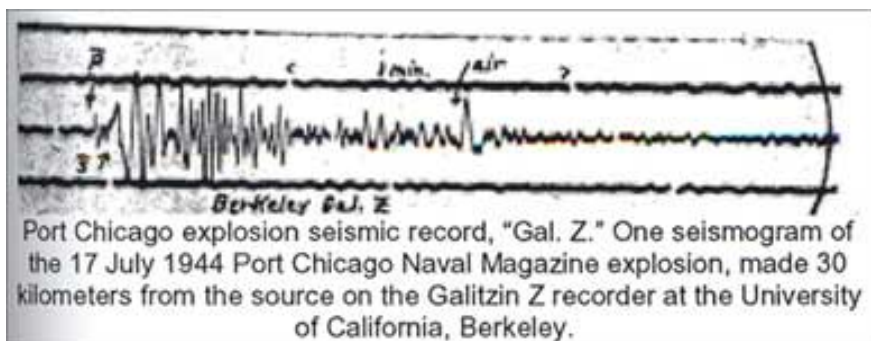

Ultimate cratering shot: "Sedan" test at Nevada Test Site, July 6, 1962 to study high-yield subsurface burst effects. "Sedan" was detonation of 104 kt device at depth of 635 ft.; explosion made 320 ft. deep crater 1,280 ft. in diameter, Dust was thrown to height of 2,000 ft. and radioactive cloud rose to 12,000 ft.; more than 12 million tons of soil was displaced. Underground explosion of this size will destroy any buried or "hardened" structure. Device diameter was less than 36."

Nuclear explosions have unique seismic signatures!!

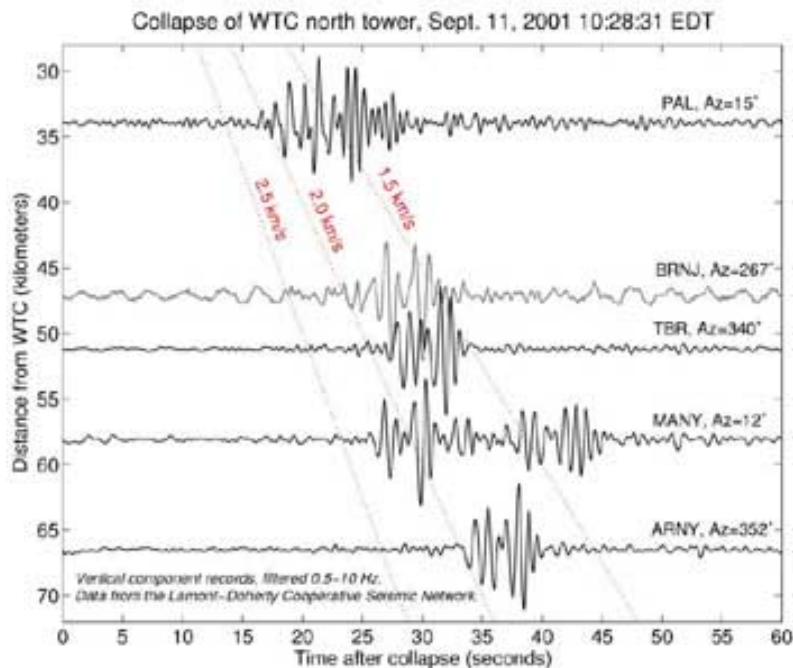

All nuclear explosions have unique seismic signatures that are hard to disguise as earthquakes. They are short, sharp tremors that reveal the massive power and speed of the explosion.

Onset of P waves from a Soviet underground nuclear test monitored at a relay station in England.

Seismic waves from the first atomic bomb test at [Port Chicago](#) on July 17, 1944.

Seismic signature from the North Tower nuclear explosion.

The Twin Towers were only designed to last until Nelson Rockefeller became President!!

New York State Governor Nelson Rockefeller (left) with NYC Mayor John Lindsay inspecting model of Twin Towers.

New York State Governor Nelson Rockefeller and his brother David were the moving force behind the building of the Twin Towers. As a matter of fact, the Towers were called David and Nelson. Following in the footsteps of their *tightwad* grandfather John D., they insisted on the cheapest job possible.

The project managers Austin Tobin and Guy Tozzoli fired the world renowned architectural firm of Skidmore, Owens and Merrill and hired an inexperienced architect from Japan named Minoru Yamasaki.

Then they put the steel for the building out for bids. The job was so colossal that only the top steel makers in the U.S. bid the job. They were: U.S. Steel and Bethlehem Steel. U.S. steel submitted a bid of 122 million dollars and Bethlehem Steel submitted a bid for 118 million dollars. Both bids were REJECTED as being too costly.... Then they put the bid out again and ALL the independent steel erectors were encouraged to bid. Only one small company bid and their bid was 20 MILLIONS dollars.

The Karl Koch Erecting Company

Karl Koch Erecting Company won the bid for ALL the steel for the Twin Towers because they were the ONLY

Company that bid the job.... They were a very small family business from the Bronx with about 20 employees. They beat out BIG STEEL with their low bid of \$20,000,000. Here are the official numbers from Karl Koch III:

U.S. Steel: \$122,000,000

Bethlehem Steel:
\$118,000,000

Karl Koch Erecting Co.
\$20,000,000

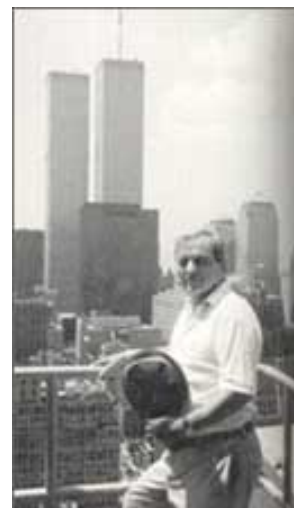

Karl Koch was a small family owned steel erecting business from the Bronx and the *only* other company to bid the job.

Karl Koch Erecting Co. built the Twin Towers.

Topping Out Day Number 1: Dec. 23, 1970. Karl Koch III can be seen on the left with brother-in-law Jack Daly and company engineer Rudy Loffredo.

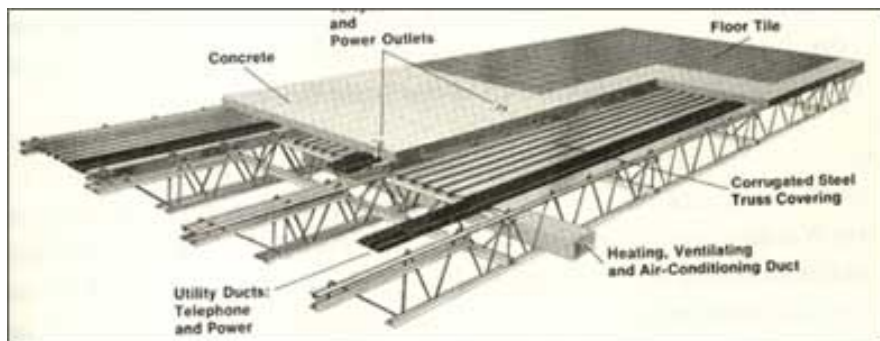

Karl Koch III in front of the Twin Towers, August, 2001.

The Port Authority did not tell them that they were the only other company to bid for the job. They were not allowed to have any cost escalation clauses in their contract. As expected, they soon went into bankruptcy and the Port Authority literally took over Karl Koch Erecting Co.

Where's the steel???

The floors were help up by flimsy trusses or bar joists. The trusses were welded together and then bolted to the outside wall by 2 1/2 bolts:

Trusses or floor paneling was all that held the floors up. Some of these trusses were over 60 ft long. Single story warehouses use this type of construction!!

Never trust a TRUSS at least when it comes to holding up a skyscraper. The outer wall was connected to the center core by 60 ft tresses or bar joists. These tresses were then covered by 4 inches of concrete. Each truss was bolted to the outside wall by 2 1/2 inch bolts. These bar joists were *supposed* to keep the outside wall straight as the wall bore the weight of the trusses and the concrete.

A similar building in Chicago called the Sears Tower used horizontal and vertical steel beams *bolted* together to support the floors.

When the Towers were completed, Karl Koch took his father to see the *masterpiece* of construction. Here is the father's reaction:

"It wasn't until the day of the topping-out that my father saw the World Trade Center for the first time. Late in the day, after I had gone back to Carteret, my sister Marie and her husband George, along with my brother Donald and Dad's nurse drove him into the city so he could finally have a look. Dad was in a wheelchair. Donald helped him out of the car and wheeled him to a good spot. "Well, Dad," he said, "what do you think of the World Trade Center?"

My father gazed up in silence, obviously in awe. Then they went inside, rode up a freight elevator, and got off at one of the higher floors so he could see the innovative structural design.

That weekend, I visited my father at Sands Point. He said he had seen the Trade Center, and that from the outside, it looked as though we had done a good job. "But Karl," he said, "**there's no steel in that building.**"

"There's a lot of steel in that job, Pop," I said. "Two hundred thousand tons."

"I didn't see any steel," he said.

"The whole wall is steel," I said. "It's like a birdcage."

Dad stared into my eyes. It wasn't the wall he was talking about; it was the floors. "It's wide open," he said. "Is every floor like that? What's going to hold that building up?"

"The floor paneling system," I explained. "That gives the outer wall its lateral support. It's the modern way of building skyscrapers." Dad shook his head. "The design is bad," he said. "It isn't strong. There should be steel columns across the whole floor to keep those ceilings up. Where are the beams and columns?"

"They're spanning the open floor area with trusses, Pop. It's a new, modern design" (Koch, *Men of Steel*, pp. 338-339).

Rockefeller was planning on stealing the Presidency during the Twin Towers construction!!

Nelson Rockefeller was elected governor of New York State in 1959. Together with his brother David, he planned and financed the building of the Towers. The Towers were completed just as before he was ready to assume the Presidency without an election:

Vice President Nelson Rockefeller (center) with President Ford and Henry Kissinger. Rocky became Vice President just as the Twin Towers were completed!!

As we stated earlier, Rockefeller knew that the Twin Towers would have a very short life span so why go crazy with small details like structural integrity. Right after the assassination of [President Kennedy](#) on Nov. 22, 1963, he introduced the [25th Amendment to the Constitution](#). This Amendment would allow Rockefeller to steal the Presidency without an election.

Had President Ford been assassinated, Rockefeller would have assumed the Presidency in 1975. Once in the Office of President, Rockefeller could serve as President until 1980. At any time during these 5 years, he could have ordered the demolition of the Twin Towers. Of course at that time the *terrorists* would have been COMMUNISTS or Reds and WW III would begin. With Rocky as President, Sept 11 could have happened *anytime* from 1975 to 1980.

The real reason why Nelson Rockefeller wanted to be President!!

Nuclear launch codes.

The President of the United States is the Commander-in-Chief of the Armed Forces. He is the **ONLY** person who has the authority to launch nuclear weapons. He is always followed by a military officer who carries the launch codes or the "nuclear football" as it is sometimes called.

For almost 2 years, by appointment only, Nelson Rockefeller as Vice President was only a heartbeat away from the Presidency and the power to launch WW III. While Governor of New York, Rockefeller visited the Jesuit General just 2 months before the assassination of President Kennedy and he was itching to wipe Russia off the map and fulfill Fatima for his "holiness."

Demolishing his Twin Towers and blaming the "Communists" would have provided Nelson with the reason for starting a nuclear war with Russia and causing the deaths of millions of people!!

Thank God he foils the plots of wicked men and *delays* their evil plans until ALL the world hears the Good News of the Gospel of Christ.

A very brave Frenchman walks between the Twin Towers!!

In August 1974, a very brave Frenchman named Philippe Petit strung a wire between the Twin Towers and walked across. The Towers were DEATH TRAPS as they had no fire sprinkler systems so this event gave them some badly needed *good* publicity and helped Rockefeller to sell the Towers to the public:

On August 7, 1974, French high wire artist Philippe Petit walked across the Towers on a cable.

Philippe Petit's walk brought the DEATH TRAP Towers some badly needed *good* publicity!!
