

3 Deadly Darwins

The 3 forerunners of the 3 deadly Darwins

Darwinism rests on the assumption that the earth is just a planet (wanderer) orbiting the sun. Darwinism further assumes that there are BILLIONS of suns in the universe and that many of them have planets like earth where life evolved by chance.

Modern EVILution would never have been possible without this HELLiocentric theory. This theory laid the groundwork for the Darwinian revolution. Likewise, with the fall of the heliocentric lie, the whole evilution house of cards will come crashing down.

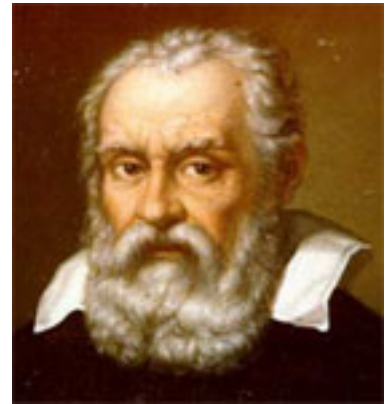

The Darwins did not arrive on the world scene in a vacuum, the way had been prepared for them by another deadly trio:

[Nicolaus Copernicus](#)
(1473-1543).

[Johannes Kepler](#) (1571-
1630).

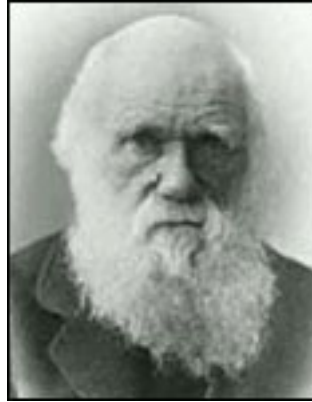

[Galileo Galilei](#) (1564-
1642).

The gradual acceptance of evolution was laid by the theory that the earth was just *another* planet (wanderer) spinning in space and going around the sun once a year. The "astronomers" also paved the way for evolution by exaggerating the SIZE and the AGE of the solar system and the universe.

Erasmus Darwin (1731-1802), grandfather of Charles Darwin.

Charles (ape-man) Darwin (1809-1882).

George Howard Darwin (1845-1912).

The man in the center, Charles (ape-man) Darwin is considered the "father" of the theory of evolution because of a book he wrote entitled *On the Origin of Species by Means of Natural Selection*. That book advocated the theory of microbes . . . to monkeys . . . to men . . . by means of pure chance and BILLIONS of years of natural selection!!

Charles copied most of his theory from his grandfather Erasmus who wasted most of his life on idle speculation about the evolutionary origin of life.

His *real* mission was to overthrow the Book of Genesis which is the only true account of the origin of the universe and of mankind.

Dr. Erasmus Darwin

Erasmus Darwin, M.D., FRS, was born at Elston, near Newark, on Dec. 12th, 1731, and he went to meet his CREATOR on April 10th, 1802. He was the grandfather of ape-man Charles Darwin. Madness did not run in the Darwin family . . . it GALLOPED!!

Darwin stole the theory of evolution from [ancient Egypt](#). Here is the first stanza of a poem he wrote and a small sample of his madness:

Organic life beneath the shoreless waves
Was born and nurs'd in ocean's pearly caves;
First forms minute, unseen by spheric glass,
Move on the mud, or pierce the watery mass;
These, as successive generations bloom,

New powers acquire and larger limbs assume;
Whence countless groups of vegetation spring,
And breathing realms of fin and feet and wing.

Erasmus Darwin, [*The Temple of Nature*](#), 1802.

Charles (ape-man) Darwin denied the existence of GIANTS!!

Charles Darwin sailed around the world and kept a detailed diary. When he arrived in the area of [Patagonia](#) he lied and denied that GIANTS actually existed.

Where ignorance is bliss, 'tis folly to be wise; because Darwin knew that the existence of GIANTS would confirm the Bible and destroy his entire theory of evolution.

The Old Testament mentions GIANTS in several places. One of the most famous was GOLIATH of Gath that David killed with a sling and a sword. The promised land was crawling with these monsters when [Joshua](#) invaded and commanded the sun and moon to stop moving in order to give him more time to defeat them in battle. Many of them escaped annihilation and fled to far off lands:

"And they (10 spies) brought up an evil report of the land which they had searched unto the children of Israel, saying, The land, through which we have gone to search it, is a land that eateth up the inhabitants thereof; and all the people that we saw in it are men of a great stature. And there we saw the giants, the sons of Anak, which come of the giants: and we were in our own sight as grasshoppers, and so we were in their sight" (Numbers 13:32-33).

Here is an except from chapter 11 of *The Voyage of the Beagle*,

"During our previous visit (in January), we had an interview at Cape Gregory with the famous so-called gigantic Patagonians, who gave us a cordial reception. Their height appears greater than it really is, from their large guanaco mantles, their long flowing hair, and general figure: on an average, their height is about six feet, with some men taller and only a few shorter; and the women are also tall; altogether they are certainly the tallest race which we anywhere saw. In features they strikingly resemble

the more northern Indians whom I saw with Rosas, but they have a wilder and more formidable appearance: their faces were much painted with red and black, and one man was ringed and dotted with white like a Fuegian." (Darwin, *The Voyage of the Beagle*, pp. 206-207).

Darwin claimed to have found the "missing link" in Patagonia!!

Modern evolution was born when Darwin arrived in Tierra del Fuego in present day Argentina. When he saw the natives with their primitive ways, his demon possessed "brain" conceived the idea that they were subhuman or a link with *his* APE ancestors.

British missionaries who tried to win the tribes to Christ and lift them from the degradation that demon worship had reduced them, found the exact opposite to be true. Here is a quote from Christian missionary E. Lucas Bridges:

"The belief that the Fuegians were cannibals was not the only mistake Charles Darwin made about them. Listening to their speech, he got the impression that they were repeating the same phrases over and over again, and therefore came to the conclusion that something like one hundred words would cover the whole language. **We who learned as children to speak Yahgan know that, within its own limitations, it is infinitely richer and more expressive than English or Spanish.** My father's Yahgan (or Yamana-English Dictionary), to which I shall refer later, contains no fewer than 32,000 words and inflections, the number of which might have been greatly increased without departing from correct speech? Darwin, when he saw the poverty and filth of these people, considered that, if he had not actually found the missing link for which he sought, these Fuegians were not far removed from it. Yet they had many social customs that were strictly observed, and though lying and stealing were usual, to call a man a liar, thief or murderer was a deadly insult" (Bridges, *Uttermost Part of the Earth*, pp. 34-35).

Some Fuegian natives who were won to Christ by British missionaries. Darwin despised the Fuegians as some sort of subhuman missing link between apes and men.

Darwin looked down on these natives and viewed them as SUBHUMAN or some kind of missing link between apes and men.

The British missionaries saw them as souls for whom Jesus shed his precious blood and they tried to win them to Christ.

They found their language to be more complex than English or Spanish!!

The Argentineans claimed sovereignty over *their* land and wiped them out with deadly germs.

George Howard Darwin and the TIDES!!

Sir George Howard Darwin, F.R.S. was a British astronomer and mathematician, the second son and fifth child of Charles and Emma Darwin.

He studied under Charles Pritchard, went on to study at Cambridge University, was admitted to the bar, but returned to science. In 1883 he became Plumian Professor of Astronomy and Experimental Philosophy at Cambridge University, England.

In 1897, he delivered a series of lectures on the tides at the Lowell Institute in Boston, Massachusetts, which were later published as a book.

Cover of the book on the tides by George Howard Darwin published in 1898.

It is comical to see heliocentric "astronomers" try and explain the action of the tides in the heliocentric system.

Galileo totally rejected the action of the moon as causing the tides and said that it was due to the rotation of the earth entirely.

Sir Isaac Newton is said to be the first to attribute the tides to the action of the moon but the ancient Greeks had an elaborate lunar tidal system.

Darwin took the modern and ancient view that the tides are caused by the action of the moon with the sun playing a supplementary role.

Thanks to his father, George was locked into the heliocentric system that has the moon orbiting the earth only once every month.

On almost every page, he has to contradict his own heliocentric theory, and has the moon orbiting daily.

The geocentric model has the moon orbiting the earth in about 25 hours and this accounts for the difference in high tides of 12 hours and 20 minutes. Darwin used this model to account for the tides but elsewhere he has the evolutionary earth spinning on its axis.

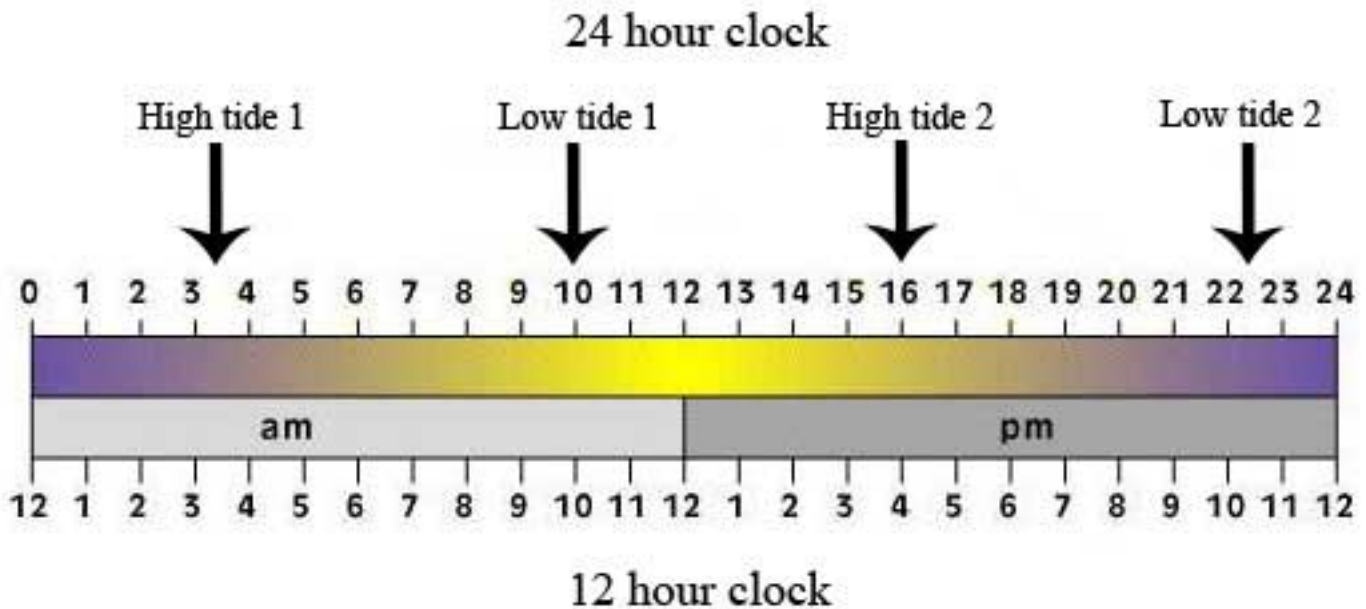

Darwin's heliocentricity could not account for the 2 daily tides so he reverted back to the traditional geocentric explanations of the tides. Here is a quote from his book:

"Since the waves follow one another at intervals of approximately, but not exactly, a half-day, it is convenient to *manipulate* the time scale so as to make them exactly semi diurnal. Accordingly we describe 24 hours 50 minutes 283 seconds as a lunar day, so that there are exactly two waves following one another in the lunar day.

The tide curve furnishes the height of the water at every moment of time, but the time having been registered by the clock of the tide gauge is partitioned into ordinary days and hours. It may, however, be partitioned at intervals of 24 hours 50 minutes 283 seconds, and into the twenty-fourth parts of that period, and it will then be divided into lunar days and hours. On each lunar day the tide for which we are searching presents itself in the same way, so that it is always high and low water at the same hour of the lunar clock, with exactly two high waters and two low waters in the lunar day." (Darwin, *Tides*, p. 213).

The heliocentric theory cannot account for the 2 daily high tides

Most places on earth that have ocean tides have 2 high tides and 2 low tides each 24 hour day separated by about 12 hours and 20 minutes:

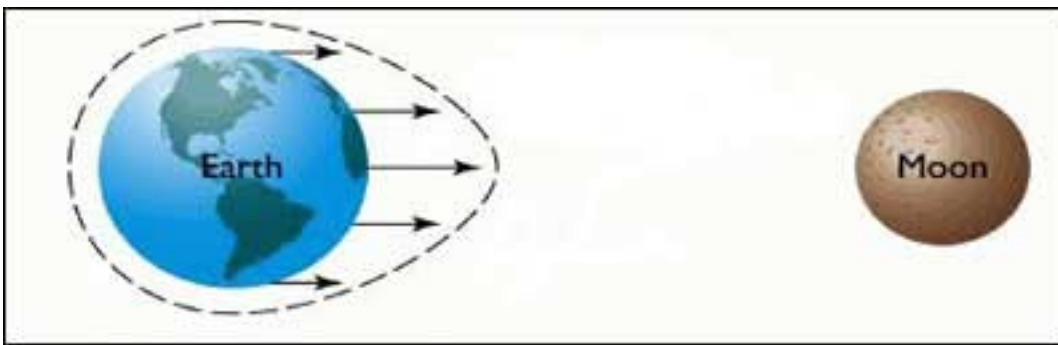

Typical tidal data for New York harbor for the month of July, 2006.

High Tide 1	Low Tide 1	High Tide 2	Low Tide 2
3:32 a.m.	10:01 a.m.	4:05 p.m.	10:20 p.m.

4:13 a. m.	10:30 a. m.	4:43 p.m.	11:06 p.m.
4:59 a. m.	11:10 a. m.	5:26 p.m.	11: 35 p.m.
5:50 a. m.	12:02 p. m.	6:13 p.m.	11:59 p.m.

Notice that the tides occur *about* 1 hour later each day. That is because the moon takes *about* 25 hours to orbit the earth while the sun takes 24.

In the rotating earth heliocentric theory, only ONE LOCATION on earth comes into contact with the moon every 25 hours.

The heliocentric theory has the moon moving very, very slowly around the earth and taking ONE MONTH to complete an orbit

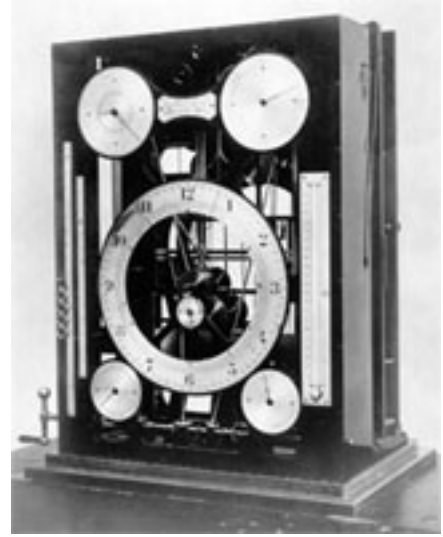

This can account for ONE tide each day but certainly not TWO.

The first computers were tide-predicting machines

Sir William Thomson (Lord Kelvin) (1824-1907) was a brilliant Scottish scientist and engineer. In 1876 he constructed a tide-predicting machine based on the proper 25 hour revolution of the moon because Lord Kelvin was a devout Protestant Christian.

Lord Kelvin's tide predicting machine is now at the Science Museum, London.

U.S. mathematician William Ferrel (1817-1891), constructed this complicated tide-predicting machine in 1882. It was the forerunner of the electronic computer.

All tide-predicting clocks are based on the proper 24 hour 50 minute revolution of the moon around the earth.
