

# The Pentagon is Using Tesla Technology to Destroy the World!!

At the end of time, God promises to destroy those that are destroying HIS earth:

"And the nations were angry, and thy wrath is come, and the time of the dead, that they should be judged, and that thou shouldst give reward unto thy servants the prophets, and to the saints, and them that fear thy name, small and great; **and shouldst destroy them which destroy the earth.**" (Revelation 11:18).

## Pentagon induced "earthquake" in China!!

Epicenter of Sichuan province earthquake.

In a mad quest for global hegemony, the Pentagon has been using weapons of mass destruction for the past 40 years!!

On May 12, 2008, the Sichuan province of China was the target of an 8.0 Pentagon induced "earthquake."

Devastation of Sichuan province "earthquake."

Rainbow like clouds appeared in the sky.

Strange celestial and terrestrial phenomena preceded the "earthquake" such as rainbow like clouds and thousands of frogs on the move.

Thousands of frogs crossing a street in China the day before the "earthquake".

The Pentagon is desperately seeking a nuclear first strike capability on Russia or China without the fear of a retaliatory response from those nations.

To this end they are using the inventions of a great Serb scientist . . . and a man of PEACE . . . named Nikola Tesla.

In the most ironic twist of fate in the entire history of the world, the Pentagon is using Tesla's technology to light and power their headquarters . . . while at the same time they are using his inventions to DESTROY the earth!!

Pentagon headquarters in Washington City.

All the lighting and electric power in the Pentagon is based on the 3 phase alternating current system discovered by Nikola Tesla.

Not only the Pentagon, but the ENTIRE WORLD, is based on his 3 phase alternating current system!!

Nikola Tesla (1856-1943).

[Nikola Tesla](#) actually ELECTRIFIED the entire planet.

While attending the Austrian Polytechnic School in Gratz, Austria, Tesla was told by his professor that an alternating current motor was a technical impossibility....Tesla, always his own man, did not share his professor's pessimism and continued to seek the solution to the AC motor.

In 1882, Tesla saw a VISION of an alternating current motor while walking with a former classmate in a park in Budapest, Hungary:

"Don't you see it" expostulated the excited Tesla. "See how smoothly it is running? Now I throw this switch—and I reverse it. See! It goes just as smoothly in the opposite direction. Watch! I stop it. I start it. There is no sparking. There is nothing on it to spark."

"But I see nothing," said Szigeti. "The sun is not sparking. Are you ill?"

"You do not understand," beamed the still excited Tesla, turning as if to bestow a benediction on his companion. "It is my alternating-current motor I am talking about. I have solved the problem. Can't you see it right here in front of me, running almost silently? It is the rotating magnetic field that does it. See how the magnetic field rotates and drags the armature around with it? Isn't it beautiful? Isn't it sublime? Isn't it simple? I have solved the problem. Now I can die happy. But I must live, I must return to work and build the motor so I can give it to the world. No more will men be slaves to hard tasks. My motor will set them free, it will do the work of the world."

Szigeti now understood. Tesla had previously told him about his attempt to solve the problem of an alternating-current motor, and he grasped the full meaning of the scientist's words. Tesla had never told him, however, about his ability to visualize objects which he conceived in his mind, so it was necessary to explain the vision he saw, and that the solution had come to him suddenly while they were admiring the sunset.

Tesla was now a little more composed, but he was floating on air in a frenzy of almost religious ecstasy. He had been breathing deeply in his excitement, and the over ventilation of

his lungs had produced a state of exhilaration.

Picking up a twig, he used it as a scribe to draw a diagram on the dusty surface of the dirt walk. As he explained the technical principles of his discovery, his friend quickly grasped the beauty of his conception, and far into the night they remained together discussing its possibilities." (O' Neill, *Prodigal Genius*, pp. 49-50).

At first Tesla offered his REVOLUTIONARY invention to the Europeans . . . but they were not interested in the greatest invention since the steam engine.

The U.S. manager of the French branch of the Edison Company advised him to seek his fortune in the New World. On the way to the boat he actually lost all his possessions and he arrived in New York with 4 cents in his pocket.

After [Sept., 20, 1870](#), millions of Roman Catholic immigrants from Europe were pouring into this country and their *only* interest in the United States was its vast economic and military potential to restore the lost Papal States to their master in Rome.

Tesla was Greek Orthodox and only interested in the use of electricity to lift the heavy burdens of his fellow human beings.

## The War of the Currents

At that time, the most important "inventor" in the world was named [Thomas Alva Edison](#)—the so-called *wizard* of Menlo Park.... Edison was credited with the invention of the DC dynamo and the electric light bulb . . . but the only thing he really invented was the ELECTRIC CHAIR!!

Tesla tried to interest Thomas Alva Edison in his discovery but was sharply rebuffed:

"Edison, for his part, was none too favorably impressed by Tesla. Edison was an inventor who got his results by trial-and error methods. Tesla calculated everything mentally and solved his problems before doing any "work" on them. As a result, the two great men spoke an entirely different technical language There was one more very important difference. Edison belonged to the direct-current and Tesla to the alternating-current school of thought. The electricians of that day could, and did, become highly emotional over their differences of opinion on this subject. Discussions roused all the fervor of a religious or political debate, and everything unpleasant was associated with the adherents on the other side of the discussion. The least unpleasant thought applied to an opponent was that he was of a low order of mentality. When Tesla enthusiastically described his polyphase system and told Edison he believed alternating current was the only practical kind of current to use in a power-and-lighting system, Edison laughed. Edison was using direct current in his system. He told Tesla very bluntly he was not interested in alternating current; there was no future to it and anyone who dabbled in that field was wasting his time; and besides, it was a deadly current whereas direct current was safe. Tesla did not yield any ground in the discussion—nor could he make any progress in his effort to get Edison to listen to a presentation of his polyphase power system. On technical grounds, they were worlds apart." (O' Neill, *Prodigal Genius*, p. 62).

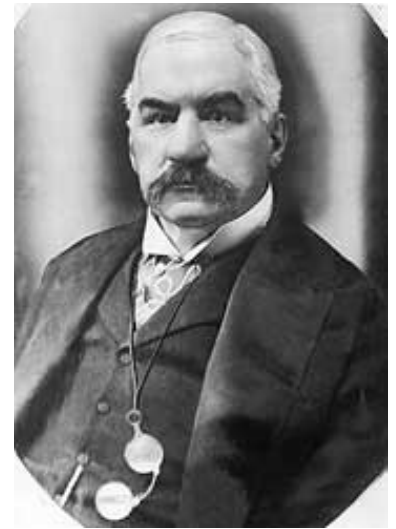

Thomas Alva Edison (1847-1931).

DC - Direct Current was just the CRUMBS that fell from the table of the Almighty's infinite store of witty electrical inventions.

Rockefeller controlled Morgan, and he in turn refused to let Edison embrace the world changing alternating current.

The War of the Currents raged for years with Tesla and George Westinghouse the eventual winners.

J.P. Morgan (1837-1913) "owned" and financed Thomas Edison.

## The Syllabus of Error condemned all modern inventions!!

The reason why Nikola Tesla ran up against a wall of hellish opposition was the [Syllabus of Errors](#) of Pope Pius IX.... This mouthpiece of the Jesuit general condemned all progress and modern civilization:

80. The Roman Pontiff can, and ought to, reconcile himself, and come to terms with progress, liberalism and modern civilization.—Allocution "Jamdudum cernimus," March 18, 1861. **(Condemned as error).**

Rockefeller, Morgan, and Thomas Edison had to obey the Syllabus, and progress in this case meant the world changing alternating current system.

The ideal time for the Jesuits was back in the 16th century when they were enslaving and killing millions of New World natives and very close to conquering the entire world.

Even though the Jesuits officially condemned all progress and inventions, there were 2 inventions that were excluded from this blanket condemnation. These inventions were:

1. **Advances in military technology.**
2. **Advances in encryption technology.**

The Vatican has ALWAYS been keenly interested in advances in secret codes or encryption because it allows them to communicate in secret all over the world.

Tesla's worldwide communication system used the EARTH to transmit absolutely secure communications, while Marconi used unsecure Hertzian waves to broadcast through the air.

The Jesuits were also desperate to acquire ANY weapon that could be used to restore the lost Papal States.

## Tesla's earthquake machine!!

Inventive ideas flowed from the mind of Nikola Tesla like water over Niagara Falls.... He was by nature a peace loving man and never envisioned that his inventions would be used for military purposes.

One of his inventions was a MECHANICAL oscillator or resonator which could be used to locate ore or oil deposits far beneath the earth:

"This system of TELEGEODYNAMICS, using mechanical vibrations, Tesla declared, would make it possible to determine the physical constant of the earth, and to locate ore deposits far beneath the surface, This latter prediction has since been fulfilled, for many oil fields have been discovered by studying the vibrations reflected from sub-surface strata" (O' Neill, *Prodigal Genius*, pp. 164-165).

One day while testing his MECHANICAL resonator, he actually caused an EARTHQUAKE in lower Manhattan:

"Quite unmindful what anyone thought about him, Tesla carried on his vibration and all other experiments. Just what experiment he had in mind on this particular morning will never be known. He busied himself with preparations for it while his oscillator on the supporting iron pillar of the structure kept building up an ever higher frequency of vibrations. He noted that every now and then some heavy piece of apparatus would vibrate sharply, the floor under him would rumble for a second or two—that a window pane would sing audibly, and other similar transient events would happen—all of which was quite familiar to him. These observations told him that his oscillator was tuning up nicely, and he probably wondered why he had not tried it firmly attached to a solid building support before.

Things were not going so well in the neighborhood, however. Down in Police Headquarters in Mulberry Street the "cops" were quite familiar with strange sounds and lights coming from the Tesla laboratory. They could hear clearly the sharp snapping of the lightnings created by his coils. If anything queer was happening in the neighborhood, they knew that Tesla was in back of it in some way or other.

On this particular morning the cops were surprised to feel the building rumbling under their feet. Chairs moved across floors with no one near them. Objects on the officers' desks danced about and the desks themselves moved. It must be an earthquake! It grew stronger. Chunks of plaster fell from the ceilings. A flood of water ran down one of the stairs from a broken pipe. The windows started to vibrate with a shrill note that grew more intense. Some of the windows shattered.

"That isn't an earthquake," shouted one of the officers, "it's that blankety-blank Tesla. Get up there quickly," he called to a squad of men, "and stop him. Use force if you have to, but stop him. He'll wreck the city."

The officers started on a run for the building around the corner. Pouring into the streets were many scores of people excitedly leaving nearby tenement and factory buildings, believing an earthquake had caused the smashing of windows, breaking of pipes, moving of furniture and the strange vibrations" (O' Neill, *Prodigal Genius*, pp. 159-160).

Tesla also claimed that his OSCILLATOR could knock down any building and even split the earth in half:

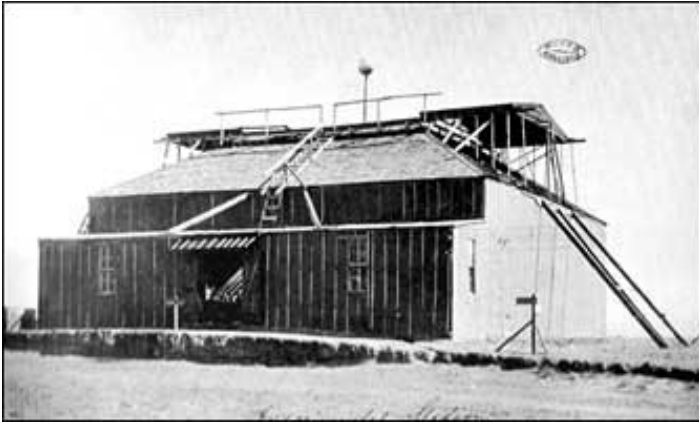

"So powerful are the effects of the telegeodynamic oscillator", said Tesla in reviewing the subject in the thirties, "that I could go over to the Empire State Building and reduce it to a tangled mass of wreckage in a very short time. I could accomplish this result with utmost

certainty and without any difficulty whatever. I would use a small mechanical vibrating device, an engine so small you could slip it in your pocket. I could attach it to any part of the building, start it in operation, allow it twelve or thirteen minutes to come to full resonance. The building would first respond with gentle tremors, and the vibrations would then become so powerful that the whole structure would go into resonant oscillations of such great amplitude and power that the rivets in the steel beams would be loosened and sheared. The outer stone coating would be thrown off and then the skeleton steel structure would collapse in all its parts. It would take about 2.5 horsepower to drive the oscillator to produce this effect." (O' Neill, *Prodigal Genius*, p. 165).

The principle of operation was like creating stationary waves in water by means of a plunger bobbing up and down at the correct rhythm.

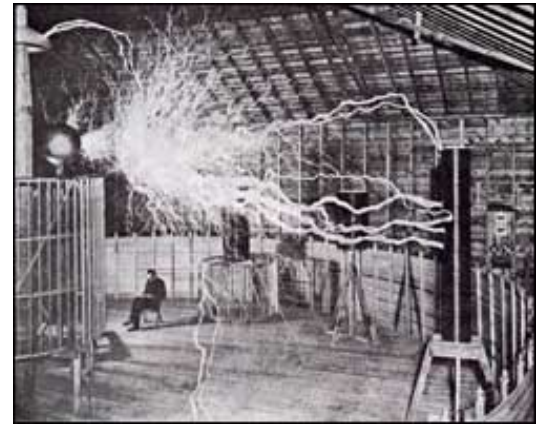

## Tesla's ELECTRICAL oscillator!!

In 1899, in Pike's Peak, Colorado, Tesla demonstrated the feasibility of transmitting electricity through the earth *without* the use of wires....He chose Pike's Peak because of its remote location and the availability of electricity from a local power station.

Tesla's Colorado laboratory in 1899.

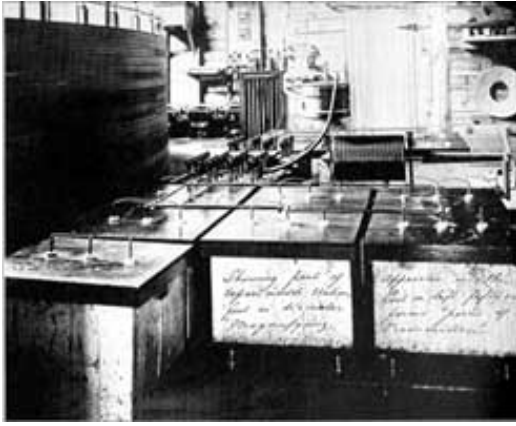

Wireless transmission of electricity to all parts of the earth was the main objective of Tesla in the famous Pike's Peak experiment.

Tesla with his magnifying transmitter producing millions of volts of electricity.

He also discovered that tremendously destructive forces could be unleashed in the earth by means of electrical resonance.

Tesla discovered that the earth was a very good conductor of electricity, and that he could set the earth in electrical oscillation just like the mechanical oscillation that almost caused an earthquake in Manhattan.

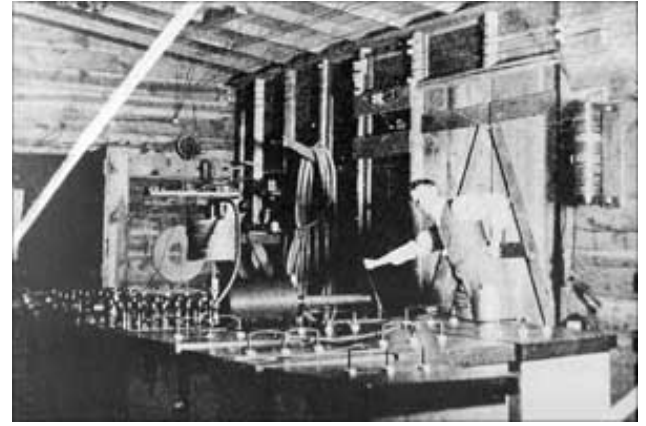

Tesla's large scale oscillating apparatus.

Power was supplied to the primary coil by the local power station.

The secondary coil was GROUNDED to the earth, producing waves which traveled to the opposite side of the world.

The returning waves were discharged through the atmosphere.

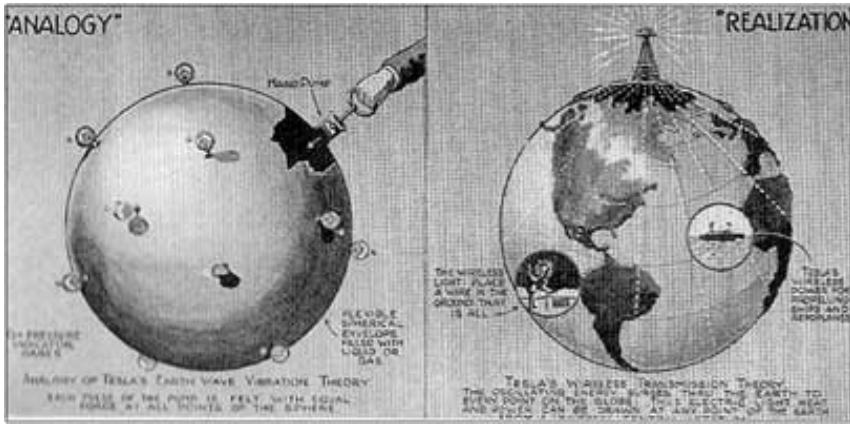

Tesla's assistant Kolman Czito prepares to throw the switch during the Pike's Peak experiment.

Here is an account of Tesla's experiment by the science editor of the *New York Herald Tribune*:

"When the moving waves expanded outward from Colorado Springs, they traveled in all directions in ever increasing circles until they passed over the bulge of the earth, and then in ever smaller circles and with increasing intensity converged on the diametrically opposite point of the earth, a trifle to the west of the two French Islands, Amsterdam and St. Paul, in the area between the Indian and Antarctic Oceans midway between the southern tip of Africa and the southwest corner of Australia. Here a tremendous electrical south pole was built up, marked by a wave of great amplitude that rose and fell in unison with Tesla's apparatus at its north pole in Colorado Springs. As this wave fell, it sent back an electrical echo which produced the same effect at Colorado Springs. Just as it arrived back at Colorado Springs, the oscillator was working to build up a wave that would re-enforce it and send it back more powerfully than before to the antipode to repeat the performance.

If there were no losses in this operation—if the earth were a perfect electrical conductor, and there were no other sources of resistance—this resonance phenomenon would build up to a destructive action of gigantic proportions, even with the charging source of only about 300 horsepower which Tesla used. Voltages of gigantic magnitudes would be built up. Charged particles of matter would be hurled outward from the earth with vast energies, and eventually even the solid matter of the earth would be affected and the whole planet disintegrated. Pure resonance, however, is not attainable. Tesla frequently stressed the fortunate nature of this fact; for otherwise disastrous results could be produced by small amounts of energy. The electrical resistance of the globe would prevent the attainment of pure resonance; but practical resonance can be obtained by supplying continuously the amount of energy lost in resistance—and this supplies perfect control of the situation."(O' Neill, *Prodigal Genius*, pp. 189-190).

Here is an artist's rendition of the wireless Tesla world power system:

From the *Electrical Experimenter*, February 1919.

Construction began immediately on Tesla's Wardencllyffe Tower on Long Island, New York.

From the *Electrical Experimenter*, February 1919.

It was never finished and the project literally bankrupted Tesla.

When Tesla had demonstrated the feasibility of his wireless power system, he rushed back to New York to begin construction on a transmitter located at Wardencllyffe, Long Island, New York. Morgan stonewalled him and created a panic on Wall St. in 1907. Multimillionaire John Jacob Astor, Tesla's close friend and financier, died on the Titanic in 1912.

### HAARP—the Pentagon's use of Tesla technology!!

HAARP is an acronym for High-Frequency Active Auroral Research Program and is run by the Pentagon from Alaska. HAARP is really a SHIELD around the United States to protect it from a missile attack. A side effect of this macabre machine is the altering of the climate and the triggering of tornadoes and hurricanes.

Tesla discovered that the earth vibrates or resonates at the very low frequency of 12 Hertz. HAARP also transmits at this very low frequency which can be used to contact submarines in the deep ocean.

Stationed at strategic locations throughout the earth, smaller versions of HAARP could be used to alter the weather and cause earthquakes in recalcitrant nations.

Aerial photo of the vast HAARP Alaska site.

Vast Pentagon HAARP array in Alaska.

Instead of using Tesla's system to provide free electricity for the world, they are destroying

HAARP antenna array.

the planet  
with weather  
warfare and  
earthquakes!!

The  
Pentagon  
refers to it as  
"owning the  
weather."

Smaller versions of this could be used by the Pentagon to alter the weather and create earthquakes.

Tesla had a relatively small amount of electricity to pump into the earth. Imagine the destructive power of this vast Pentagon installation in such a remote location.
